### DETAILED ACTION

1. **Claims 1-17** have been presented for Examination. **Claims 1-17** have been Examined and rejected.

#### Claim Objections

2. **Claim 5** is objected to because of the following informalities: Claim 5 is written as a dependent Claim however it does not reference any of the independent or dependent claims, *more specifically, Claim 5 recites... "The apparatus as recited in claim wherein..."* no claim number is present. Appropriate correction is required.

#### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Independent **Claims 1 and 16** and dependent **Claims 2, 3, 5 and 7-12** are rejected as being clearly anticipated by **Pearson U.S. Patent 5,903,754**.

3.1 As regards independent **Claims 1 and 16** the *Pearson* reference teaches, apparatus/method of creating a protocol stack (**Figure 1 & 2, Col. 5 Lines 66-67, Col. 6 Lines 1-16**), with a standardized interface (**Figure 3 Items 102, 104, Figure 5 Item 150**), an instance for the administration of the protocol stack that contains a protocol layer (**Figure 6 Item 162**).

3.2 As regards dependent **Claims 2 and 3** the *Pearson* reference discloses a plurality of description files (**Figure 1 Items 42 and 44**).

3.3 As regards dependent **Claim 7** the *Pearson* reference discloses multiple layers of protocol stacks (**Figure 3**).

3.4 As regards dependent **Claims 5, 8-12** the *Pearson* reference discloses a SAP interface (**Figure 5 Item 150**).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
  2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
4. Independent **Claim 17** and dependent **Claims 4, 6 and 13-15** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Pearson U.S. Patent 5,903,754** in view of **Autrey et al. U.S. Patent 5,774,695**.

4.1 As regards independent **Claim 1** see paragraph 3.1 above.

**4.2** As regards independent **Claim 17** and dependent **Claims 4 and 6** the *Pearson* reference teaches all of the claimed limitations except for a plurality of emulation managers (*see paragraph 3.1 above*).

The *Autry et al.* reference discloses a plurality of emulation managers (**Figure 6 Item 68, Figure 7 Item 84, Figure 9 Item 92 and 95, Figure 10**).

It would have been obvious, to one of ordinary skill, in the art, at the time the invention was made, to have added an emulation manager to the protocol creation method/apparatus of the *Pearson* reference because an emulation tool can be used to quickly test and evaluate the protocol that was just created.

**4.3** As regards dependent **Claims 13-15** the *Pearson* reference does not expressly disclose a GUI.

The *Autrey et al.* reference discloses a GUI (**Figures 10-16A**).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made to have provided a GUI for configuration of the protocol stack because of the ease of use provided by an interactive visual representation of the components being put together by the programmer to create said protocol stack and the advantage provided by the increase in productivity realized by providing an easy to use programming interface.

### **Conclusion**

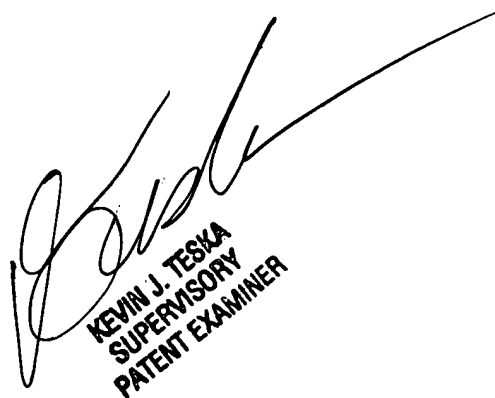

**5.** This action is **NON-FINAL**. Claims 1-17 have been presented for examination. Claims 1-17 have been examined and rejected.
